EXPERIENCE

Promethean Tech

Software Engineer — Backend & Distributed Systems

July 2022 – Present

Ahmedabad, India

73Strings — Enterprise Multi-Tenant Authorization Platform (FinTech)

- Architected and led backend microservices (UAM, SCIM, and Scheduler) serving 1M+ active users across 100+ organizations and 13 SaaS production environments.
- Reduced API response times by over 50% by resolving SQL N+1 query patterns, refactoring slow indexing queries, and integrating Datadog APM tracing.
- Engineered a SCIM 2.0 auto-provisioning microservice from scratch in Java 21 and Spring Boot 3, enabling Okta and Entra ID synchronization.
- Automated enterprise SAML SSO onboarding by programmatically generating and patching Azure AD B2C custom policy XMLs via Microsoft Graph API for Microsoft Entra ID, Okta, PingOne, and Google Identity.
- Optimized high-volume entity authorization copying by developing a multi-threaded direct-SQL engine that bypassed ORM overhead, paired with high-throughput Redis caching.
- Designed an automated security compliance audit pipeline using Spring Scheduler and ShedLock, streaming logs from Elasticsearch to customer AWS S3 buckets in 10,000-record batches for Splunk ingestion.
- Mentored junior engineers, conducted code reviews, and managed direct technical communication with enterprise clients for production issue resolution.

Livcast — Multi-Platform Live Video Streaming Platform

- Built a full-stack cross-platform mobile app (React Native) and Java Spring Boot backend for automated live video streaming to 3 major platforms — Facebook, YouTube and Twitch via RTMP protocols.
- Engineered automated video processing pipelines using FFmpeg core libraries to enable low-latency pre-recorded video scheduling, automated video transcoding, and link-based media ingestion.
- Architected cloud storage flows using AWS S3 for multipart large video file uploads, implementing chunked uploading to ensure improved upload reliability over unstable mobile network connections.
- Implemented dynamic cursor-based database pagination for high-throughput video feed listing, significantly reducing server memory consumption on large catalog fetches.
- Designed Spring Boot background workers to process scheduled video broadcasts and manage concurrent streaming workflows reliably.
- Implemented secure JWT authentication, real-time streaming status updates via WebSockets, and dual payment processing integration using Razorpay and Stripe gateways.

TECHNICAL SKILLS

Languages: Java 21, JavaScript (ES6+), TypeScript, SQL

Backend & Microservices: Spring Boot 3, Spring Security, Spring Data JPA, REST APIs, Microservices Architecture, JWT, OAuth2, SAML, WebSockets,

Cloud, DevOps & Storage: AWS (S3, STS), Azure AD B2C, Redis, Elasticsearch, MySQL, Splunk

Frontend & Mobile: React, React Native, Redux

Core CS Competencies: Distributed Systems, System Design, Low-Level Design (LLD), OOP, Data Structures & Algorithms, Multi-Tenancy, IAM, SCIM 2.0.

AI / LLM: Google Gemini API, LLM-based Workflow Automation, Knowledge-Base Q&A, AI-assisted Classification & Response Generation.

EDUCATION

Silver Oak University

B.Tech in Computer Science | Ahmedabad, India

2022
